SEBASTIAN ALONSO BONILLA DE LA CRUZ

Senior ETL / Data Engineer

Lima, Peru | +51 992 625 400 | sebastian.bonillad@gmail.com | linkedin.com/in/sebastianbonilladelacruz

PROFESSIONAL SUMMARY

Senior Data & ETL Engineer with 5+ years of experience architecting resilient data processing systems, scalable ETL/ELT pipelines, and enterprise data models across AWS, Azure, Snowflake, and Databricks. Deep expertise in SQL, Python, Apache Airflow, dbt, and Delta Lake, with an emphasis on data warehouse optimization, automated data quality assurance, CI/CD, and system reliability. Demonstrated history reducing pipeline latencies, slashing compute costs, and turning high-volume data streams into high-performance, audit-ready analytical platforms.

TECHNICAL SKILLS

Languages & Core: Python (Pandas, PySpark), Advanced SQL, Bash, Git/GitHub, REST APIs, JSON/Parquet.
Data Engineering & ETL: Scalable ETL/ELT Design, Apache Airflow (DAGs), dbt, Delta Lake, CDC, SCD Type 2, Medallion Architecture.
Cloud Platforms & DWH: AWS (S3, Glue, Lambda, Athena), Microsoft Azure (Synapse, Data Factory, IoT Hub), Snowflake, Databricks.
Quality, Governance & Ops: Data Quality Checks, Schema Enforcement, Unity Catalog, CI/CD (Azure DevOps, GitHub Actions), Docker.

WORK EXPERIENCE

Cheers Health | Senior Data Engineer — **Jul 2025 – May 2026 | Texas, USA (Remote)**

- Architected decoupled ELT pipelines and data ingestion engines processing 4M+ daily transactions from multi-channel commerce APIs into AWS cloud data repositories (S3, Glue, Athena).
- Optimized dimensional data models and Delta Lake structures, reducing complex analytical query latency by 42% and trimming monthly warehouse compute overhead.
- Engineered automated data quality validation frameworks and anomaly detection checks across production pipelines, preventing corrupted data loads and ensuring reporting accuracy.
- Implemented GenAI/LLM-assisted workflows for data classification and entity extraction, condensing multi-step batch processing intervals from ~8 hours to under 45 minutes.

The Hawkers Club | Senior Data Engineer — **Jan 2024 – May 2025 | Denver, USA (Remote)**

- Designed and maintained production dimensional models using dbt and Snowflake/Synapse, transforming over 800K+ daily e-commerce and subscription event records.
- Authored and orchestrated 100+ Apache Airflow DAGs with automated alerting, error handling, and idempotent task logic, reducing recurring pipeline incidents to zero.
- Constructed optimized data aggregation marts feeding business intelligence dashboards, significantly expediting self-service analytics retrieval across operational units.

DigitalCALA / Telcel | Senior Implementation Consultant (Data Engineering) — **Apr 2021 – Jan 2024 | Florida, USA (Remote)**

- Built scalable Medallion architecture (Bronze/Silver/Gold) on Databricks over 10M+ telecommunication subscriber records, applying Unity Catalog for unified governance and lineage.
- Engineered geospatial data extraction, join, and transformation pipelines, slashing reporting turnaround time from 24 hours to under 2 hours.
- Enforced SCD Type 2 tracking, robust schema enforcement, and integrated CI/CD deployment pipelines via Azure DevOps for automated, zero-downtime releases.

Pallon | Data Analyst & Pipeline Developer — **Oct 2020 – Apr 2021 | Zurich, Switzerland (Remote)**

- Developed Python-based ETL routines performing spatial joins and aggregations on 50K+ infrastructure inspection assets, cutting preprocessing runtime from 6+ hours to <1 hour.

CERTIFICATIONS & EDUCATION

AWS Certified Data Engineer – Associate • AWS (2026)
Fabric Data Engineer Associate (DP-700) • Microsoft (2025)
Azure Data Fundamentals (DP-900) • Microsoft (2025)

B.Sc. in Bioengineering • UTEC, Lima, Peru (2018 – 2023)
Full Stack Software Development • 4Geeks Academy (2023)
Languages: Spanish (Native) | English (C1 – Advanced Professional)
